Chapter 6

Common problems

FAQ

How to judge if the tablet is functional?

1. If you can use the pen as the mouse after the tablet is connected to the computer,it is functional.If you can not take control of the pen,check the pen at first.

2. if the tablet is unable to use,please check the states without installing the driver and connect the tablet to another computer.If it works well,the problem why the tablet can not been used is in the driver or system.

3. If the tablet indicators work normally,the tablet could be distinguished and the driver icon is showing up,but the pen is out of control.Please check the pen.For example, you can try to remove the function of 'driver panel support the panel computer'.Now please check if you can contrcl the pen.If not,please restart the computer and try again.

When the installation process,it logs out automatically

Solution:close down all the secure and Sofware Manager softwares and then install it again.

The display of the tablet indicators

1. Just when the tablet is connected to the computer,the indicator will lighting for a while.When the computer is distinguishing the tablet,the little icon at the lower right comer of your PC shows normally,the indicator stops lighting.

2. When the tablet words normal,the pen reaches to the reading area,then the indicator twinkles normally. If the indicator keeps twinkling,it's maybe that USB connects poorly or not stable.You can try another USB port,restart your computer or change anothe anothe another computer.

Where to start the driver interface?

Click the icon in the lower right comer on your PC.

Note:the icon consists of a black-white tablet and a pen.Sometimes it will be hide,you need to press 'Show hidden icons' to display the hide icons.
